

# **Software Quality Assurance Manager**

## **Job Description:**

Impulse Point, a rapidly growing company focused on addressing the challenges of instituting Network Access Control (NAC) policies relating to intellectual property and endpoint security within the large enterprise environment, has an immediate opening for a Software Quality Assurance (QA) Manager. The selected person will be responsible for test planning and development, test execution, defect management, and all other testing activities that lead to the achievement of high quality and scalable product delivery.

## **Requirements/Qualifications:**

- 4 year degree in Computer Science is preferred.
- At least 5 years of experience in software manual testing with at least 2 years being QA Lead Specialist or Manager.
- Experience building QA team and leading a small QA team.
- Proven ability to write good detailed test scripts and execute test scripts on a day-to-day basis.
- Experience and involvement with the complete software product life cycle.
- Experience in testing web-based and client-server applications.
- Ability to write SQL statements for data verification.
- Experience in using MS Office.
- Knowledge of Java, Linux, MySQL, JavaScripts, CSS, and Virtual Machines is big plus.
- A team player, self-starter, and quick learner.
- Experience with start-up software development environment a major plus.

## **Responsibilities:**

- Develop detailed test plan/test scripts for all product releases including main releases and hot/patch fixes.
- The execution of all test scripts and end user experience tests.
- Help with the recreation and validation of customer reported issues.
- Updating test scripts with valid customer reported issues.
- Managing and maintaining testing-related documentation, including test plans, test cases/scripts, and bug reports.
- Tracking problems and communicating defects to developers as they occur.
- Provide proactive software quality assurance process assistance.
